WORK EXPERIENCE

IBM

Markham, ON

Software Developer

June 2024 – Present

- Architected and shipped an AI assistant UI from proof of concept to production with 5 partner teams. Negotiated API contracts and integrated React into Angular with streaming and 10 locales.
- Cut render time by 62%, from about 8 to 3 seconds on a 50-row table. Parallelized asynchronous work in shared rendering logic used across 100+ product pages.
- Designed and built a reusable TanStack Table component with selection, column controls, and embedded workflows, adopted across 50+ product pages. Enabled one-field migration from the legacy data grid.
- Engineered custom session-history search, rename, and delete components to fill Carbon AI library gaps, avoiding an estimated multi-week release delay. Coordinated accessibility fixes with the Carbon team.
- Delivered 50+ product stories in the first half of 2026 with none reopened. Cut average development time by over 50% using Bob (IBM's AI coding agent).
- Built a RAG pipeline over 35 component-library docs and served it to Bob via MCP for 15 developers. Improved the agent's accuracy on internal components and shortened feature development time by 40%.
- Championed AI coding-agent adoption on the team. Standardized agent rules in 2 repositories, built an automated first-pass PR review workflow, and hosted monthly knowledge-sharing sessions.
- Published 3 TypeScript packages used by 2 teams across 3 repositories. Reduced duplicate UI work with shared components, two-way app-shell messaging, and loading states.
- Shrank the Angular production build size by 35% through lazy loading and standalone components.
- Maintained 81% to 93% new-code coverage on major features with paired Cypress tests and SonarQube gates. Automated Playwright regression tests for 4 logistics feature areas.
- Led daily scrums, sprint planning, and retrospectives as Scrum Master. Mentored 5 engineers through onboarding, pair programming, and code reviews, helping them deliver features independently.
- Remediated 20+ CVEs in shared application infrastructure, prioritizing vulnerabilities with security teams.
- Earned IBM's highest performance rating for 2025 and a 2025 Growth Award for key feature delivery. Also received a Developer Jumpstart Judge's Choice team award.

Front-End Developer Intern

May 2022 – May 2024

- Cut dashboard string-interpolation time by about 24%, moving it off the main thread into parallel Web Workers with RxJS. Reached over 80% unit-test coverage on the async path.
- Delivered 6 climate-risk views with configurable dashboards and widgets for location analysis, asset exploration, financial-risk reporting, and exports.
- Automated GraphQL widget migration with Node.js across 4 dashboards and related detail pages, replacing inline queries with resource-based configurations.
- Implemented scoped filtering across 8+ table configurations, isolating dashboard state, automating filter subscriptions, and persisting filters in the URL.
- Centralized user lookup and caching across 4 application routes, reusing user data for assignment displays and dashboard workflows.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, Java, SQL, HTML/CSS

Front-End: React, Angular, Next.js, NgRx, RxJS, Redux, TanStack Table, Tailwind CSS, Carbon Design System, Storybook, Jest, React Testing Library, Cypress, Playwright

Back-End: Node.js, REST APIs, GraphQL, Spring Boot, PostgreSQL, Redis

CI/CD & Quality: Git, Jenkins, SonarQube, Docker, Kubernetes, OpenShift, Webpack, Vite, Artifactory

AI Tools: Bob (IBM's AI coding agent), Codex, Claude Code, Model Context Protocol (MCP), Retrieval-Augmented Generation (RAG)

EDUCATION

University of Calgary

Calgary, AB

Bachelor of Science in Computer Science with Internship Program

September 2019 – June 2024

- Concentration in Human-Computer Interaction
